SUMMARY

Full-stack software engineer with 6+ years designing, building, and shipping production web applications end-to-end — from architecture and data models through payments, third-party integrations, and deployment. Founded and led development of a two-sided marketplace, managing a team of five. Comfortable owning products from zero to live, working directly with clients and stakeholders, and delivering under real-world constraints.

EXPERIENCE

Founder & Full-Stack Engineer — Coachmake 2023 – 2026

Two-sided coaching marketplace (Delaware C-Corp)

- Architected and built the platform end-to-end: coach onboarding, client discovery, session scheduling, program delivery, and recurring membership subscriptions bundling sessions, programs, and workbooks.
- Led a team of five across engineering and operations; owned technical direction, prioritization, and delivery.
- Grew the platform to **30+ active coaches**, working directly with users to shape onboarding and feature priorities.
- Designed a unified conversion tracking and attribution system spanning web and mobile — custom UTM event schema, Adjust SDK integration, and a canonical click-ID join key linking ad spend to in-product outcomes.
- Integrated payment processing for marketplace transactions and recurring subscription billing.

Lead Developer — I Can Relate Apr 2025 – Jun 2025

Sober-coaching platform (contract engagement)

- Led development of a coaching platform for sobriety support, translating the founder's vision into a working product.
- Owned the full stack: application architecture, data modeling, front-end implementation, and deployment.
- Collaborated directly with a non-technical founder, scoping features and communicating trade-offs to keep delivery on schedule.

Independent Software Developer 2021 – Present

Freelance full-stack development for small businesses and startups

- Delivered production websites and applications for **8+ clients**, including tattoo studios, a real estate business, and service agencies — handling scoping, development, launch, and support.
- **AuditorsIQ (auditorsiq.com)**: built a public-facing social media audit tool plus a full internal sales platform (admin.auditorsiq.com) — automated prospect sourcing via the Google Places API, data enrichment pipelines, lead scoring and tiering, and pipeline management tied to generated audit reports.
- Managed the complete client lifecycle independently: requirements gathering, proposals, delivery, and post-launch maintenance.

TECHNICAL SKILLS

- **Languages & Frameworks**: JavaScript / TypeScript, Node.js, Angular, HTML/CSS
- **Systems & Integrations**: REST API design, payment processing, subscription billing, mobile attribution, Google Places API, data enrichment pipelines
- **Data & Infrastructure**: relational data modeling, authentication, deployment and hosting of production applications
- **Web3 (working knowledge)**: Solidity, smart contract development, Web3.js
